

## Crash Cage for KOWA 4/3" inch Lenses

The lens cages fix the lens firmly to the camera, to protect it against Hi-G forces during impacts. The lens settings for focus and iris are fixed after setting by nylon-tipped Allen screws, so they not alter their original setting during the recording, resulting in correctly focused and exposed images.

**Customer benefits:** Correctly focused and exposed images due to fixed lens settings  
Extended lens life due to protection against Hi-G impacts
